

EdgeGlove

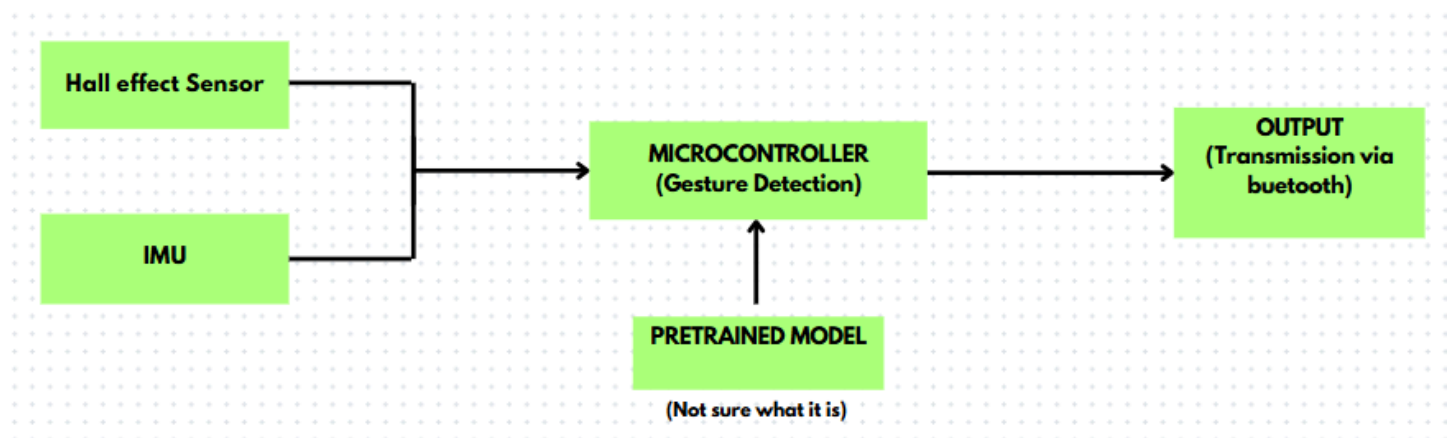

As part of the research and development effort on building an EDGEML device, we would like to develop a wearable keyboard glove prototype to experiment and demonstrate Edge AI technology.

Objectives:

1. Develop and optimize AI models to deploy on the edge.
2. Demonstrate Edge AI implementation on microcontroller.
3. Evaluate Edge AI performance.

Wearable Keyboard Glove Prototype

The prototype uses gesture detection (recognize hand movements), allowing users to input characters and commands. By deploying the AI model on a microcontroller, the prototype achieves real-time processing and decision-making capabilities on the edge.

Technical Specifications:

1. Hardware Specification:

- Sensors-
- Microcontroller-
 - a. Processor-
 - b. ClockSpeed-
 - c. Memory-

2. Machine Learning Model:

- Model Type-
- Input Layer-
- Output layer-

3. Software Stack:

- AI Framework-
- Embedded Programming-
- Communication Protocols-

4. Performance Metrics:

- Latency-
- Power Consumption-
- Accuracy-
